## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6, 11-16, and 21-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi (US Pat. # 5,845,177) in view of Moriya et al. (US Pat. # 6,571,060).

Claims 7-10, and 17-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Choi (US Pat. # 5,845,177) and Moriya et al. (US Pat. # 6,571,060) as applied to claims 1 and 11, and in further view of Hattori (US Pat. # 6,381,432).

Claims 23-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hattori (US Pat. # 6,381,432) in view of Moriya et al. (US Pat. # 6,571,060).

Regarding claims 1-27, please refer to the previous rejections contained in the office action dated August 17, 2005.

### ***Response to Arguments***

Applicant's arguments filed November 17<sup>th</sup>, 2005 have been fully considered but they are not persuasive.

In response to applicant's argument that Moriya et al. is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant

was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, Moriya et al. is considered to be analogous art for the following reasons: Applicant claims, "the first passive roller gear is made of a material having a lower hardness than the drum gear to absorb impulses due to a pitch error from gear teeth of the drum gear and the first passive roller gear." Moriya et al. teach, a plurality of gears, constituted by using, at least one of, polyester, polyamide, and polyacetals. The plurality of gears having a low bending elastic modulus to reduce the noise generated at the gear-meshing portion without compromising the durability of the gears (see Abstract).

To reduce the noise generated by the gears, the amount of vibration is being reduced, which is the same particular problem addressed in the present application.

### ***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
